ABOUT ME

Dedicated and results-driven professional with combined 3 years of experience in Low Code development and Graphic Design. I thrive in dynamic and fast-paced environments known for delivering task on time and based on requirements, I am passionate about developing websites, applications and committed to driving success and innovation.

WORK EXPERIENCE

Bubble.io Developer

SFTA (September 2024 - Present)

- Designed and developed custom no-code web applications using Bubble.io, delivering scalable solutions tailored to client needs.
- Built and launched Stagepay, showcasing advanced proficiency in workflow automation, database structuring, and API integrations.
- Integrated third-party tools such as Auth0 for secure user authentication, Klaviyo for email marketing automation, Retool for internal dashboards, and webhooks for real-time data synchronization and external service communication.
- Applied responsive design principles to ensure applications function seamlessly across various devices and platforms.
- Worked closely with clients to define project requirements and translate them into actionable technical plans.
- Enhanced app functionality by implementing payment gateways, analytics, and custom API integrations.
- Leveraged design tools like Figma and Canva to create intuitive and visually appealing user interfaces that align with client branding.
- Delivered post-launch support, addressing debugging, feature updates, and user-requested enhancements.

Technical Consultant (Appian Developer)

Via Appia Philippines (2022 - 2024)

- Perform application development based on customer requirements using Via Appia's authorized development platforms.
- Complete all required documentation as part of the development activities, including status reports, technical/functional specifications, technical documentation, etc.
- Maintain communications with internal and external project teams, as defined within the engagement/project
- Analyze and interpret functional requirements and be able to translate them into effective technical documents.
- Assist customers with the identification and resolution of application development related issues.
- Work with the sales/pre-sales team when necessary to support the estimates of the technical services for new or existing accounts
- Participate in meetings regarding application development cycle such as Sprint planning, Retrospective, etc.
- Integrate and test API's provided by the backend developers
